

Cutting edge kitchen design

The recent opening of Kitchen Gallery showroom in Stratford upon Avon marks a new phase for one successful Midlands company.

The 21st Century kitchen is no longer just a work space – simply an area for preparing food. In the modern home it has become the heart of the living space. Style, luxury, technology – these are the essentials today.

Tahir Mahmood, the managing director of Kitchen Gallery, knows that his business has to be at the cutting edge in terms of state-of-the-art kitchen design.

Kitchen Gallery have been in the business of kitchen design and installation for a quarter of a century, and have seen enormous changes in requirements during that time. The company has acquired knowledge and

experience that is second to none. It is a thriving business which aims to deliver the very highest quality, and the most modern kitchen design available.

Two years ago the company moved from its original premises in Dorridge to set up a brand new showroom in Stratford Road, Shirley. Late last year the company opened a stunning new showroom in Birmingham Road, Stratford-upon-Avon, and there are plans to further expand by opening premises in Sutton Coldfield in the near future.

“As a company, we’ve always looked for the very highest quality in terms of design and function,” Tahir says. That’s why the company have chosen

SieMatic, a German company that is constantly developing kitchen design and function. They are constantly pushing the boundaries, and, in the opinion of Kitchen Gallery, there are none better.

Kitchen Gallery have been selling and installing SieMatic kitchens since the early 1980s – not only in Warwickshire, but across the world.

The company has had commissions from all over the globe, including Abu Dhabi, Morocco and many parts of Europe.

SieMatic has been responsible for the “floating spaces” concept in the modern kitchen, which offers a multitude of possibilities that leap ahead of the

current conventional design solutions.

One of the central elements of the concept is the panel system, newly developed by SieMatic, which seamlessly blends kitchen and living room to form a single space. The panel system is available in many of the materials in SieMatic's extensive portfolio, which can be seen at Kitchen Gallery showrooms. These feature natural woods and finishes, including matt or gloss lacquer as well as high-quality laminate that can be combined in many ways. The matching panel shelves offer many different possibilities for a flexible wall design.

The arrangement and combinations of different colours and materials create

appealing accents. The functional elements are available in different sizes and lengths as well as in various materials, which can be used in the same or contrasting tone as the panel wall's surface.

Kitchen Gallery's objective is to create fluidity between rooms and allow transitions of functional elements and, in so doing, to achieve continuity around cooking and living as well as technology and aesthetics.

The showroom in Solihull has five stunning kitchens in spacious settings, designed by architect Mick Rocerto to SieMatic standards, which gives clients and customers an excellent idea of how the kitchen design can be incorporated

into their own homes. The new showroom in Stratford upon Avon has been shortlisted for the annual KBB AWARDS – for the Showroom Of the Year Award – which will be presented in March at the NEC Metrople where the industry gathers every year. The short list is from over 600 entries from UK & Ireland.

Why not take a look for yourself? You can find Kitchen Gallery showrooms in Century House, 100 Stratford Road, Shirley, Solihull, B90 3BH, Tel: 0121 744 3953, or 257 Birmingham Road, Stratford-upon-Avon, CV37 0BF, Tel: 01789 267 001, or visit the website: www.kitchengallery.co.uk
